

Yifan Liu

Date of Birth: January 2002

Mobile: +86 15630826628 | Email: LouisLiu2025@126.com | GitHub: github.com/Remain123

Education

The University of Manchester – MSc Communications and Signal Processing	Sep 2025 – Dec 2026
University of Liverpool – BEng Electrical Engineering and Electronics (Communications)	Sep 2023 – Jun 2025
Xi'an Jiaotong-Liverpool University – BEng Telecommunications Engineering	Sep 2021 – Jun 2023

Internship Experience

Tencent (Beijing) | Project Management Intern Jun 2025 – Sep 2025

Cross-functional Coordination: Coordinated R&D, product, public relations and external media for projects including WAIC; consolidated requirements into deliverable lists with agreed quality standards and deadlines.

Tracking & Issue Closure: Maintained milestone trackers for industry events, updating task status and flagging delays; followed up with responsible teams on corrective actions to support timely delivery. Reviewed communication gaps and resource constraints, capturing lessons learned in reusable templates.

Service Provider Coordination: Matched media and photography resources to project scope and budgets; maintained partner contacts and collaboration preferences, and coordinated preparation requirements with external providers to support event execution.

LONGi Green Energy Technology Co., Ltd. | Sales Engineer Intern Jun 2024 – Sep 2024

Customer Interface: Joined engineers on customer visits, assessed rooftop conditions and electricity requirements, and recorded project opportunities; liaised with EPC contractors and energy service providers, relaying customer needs to support proposal preparation.

Commercial & Cost Analysis: Supported solar-plus-storage proposals with capacity, generation, payback and levelised cost of energy (LCOE) calculations; compared competitor specifications and pricing to support discussions on technical suitability and project economics.

Quotation & Project Support: Assisted with bid documents, quotations and contracts; tracked drawing checks, production schedules and delivery updates. Recorded customer requests and project blockers, following up with technical, delivery and finance teams on outstanding actions to support commercial discussions and contract signing.

Market Research & Feedback: Reviewed regional solar policies, competitor module pricing and promotional activities, consolidating findings into market reports. Shared customer feedback on modules and storage products with the product team to support proposal and sales strategy adjustments.

Baoding Subo Auto Parts Co., Ltd. | Engineering Management Intern Jun 2023 – Sep 2023

Requirements Coordination: Helped translate customer dimensional, load-bearing and delivery requirements into drawing parameters and tooling specifications for Great Wall Motor component projects, clarifying requirements between the customer, engineers and production teams.

Development & Issue Resolution: Followed tooling development through drawing checks, stamping and welding process matching, sample inspection and defect correction; relayed customer design changes to engineers and supported tooling revisions to reduce subsequent rework.

Delivery Tracking: Tracked design, tooling trials and inspection milestones; coordinated acceptance updates and workshop priorities to address delays and support on-time delivery. Consolidated recurring queries and drawing discrepancies into reusable requirements and verification checklists.

Project Experience

A Comparative Study of Deep Learning Models for LoRa Radio Frequency Fingerprinting | MSc Dissertation Sep 2025 – Dec 2026

Data Analysis & Benchmarking: Reproduced a residual CNN baseline and implemented a Transformer model for device identification; organised RF datasets, preprocessing and training/testing workflows. Compared identification performance using consistent datasets and evaluation conditions, analysing differences between model approaches.

Structured Evaluation: Built a reusable pipeline for dataset loading, training and testing to assess model accuracy and applicability to IoT authentication.

Device Authentication for LoRa Using Deep Learning and RF Fingerprint | BEng Dissertation Mar 2024 – Mar 2025

Requirements & Validation: Defined signal acquisition, data processing and classification requirements for LoRa device authentication; collected RF waveforms using GNU Radio and built a Python deep learning pipeline. Refined feature extraction and identification workflows to evaluate fingerprint differences across hardware devices.

Leadership & Entrepreneurial Experience

Xi'an Jiaotong-Liverpool University | President, Basketball Club Sep 2022 – Jun 2023

Sponsorship & Event Organisation: Liaised with external sponsors to support club activities; organised multiple events with over 500 participants each, coordinating event preparation and on-site execution.

Game Item Investment & Trading | Team Portfolio Manager Aug 2025 – May 2026

Capital Management & Performance: Managed over RMB 5 million in team capital for investment and trading in virtual game items; achieved a peak return of over 80%.

Skills

Languages: Fluent in English and Mandarin; academic study in the UK.

Visa Status: Holds a UK visa for entrepreneurship.

Excel & Data: Common formulas, PivotTables, project trackers and comparison tables; Python for data processing and analysis.

Engineering: MATLAB, GNU Radio, Multisim and LTspice; electronics and communications engineering background.
